

# CC-NIE PI Meeting

Campus CI Plan Session

# Campus CI Plan Requirement

- ❖ All proposals into the CC\*IIE program must include a Campus Cyberinfrastructure plan within which the proposed network infrastructure improvements are conceived, designed, and implemented in the context of a coherent campus-wide strategy and approach to Cyberinfrastructure (CI) that is integrated horizontally intra-campus and vertically with regional and national CI investments and best practices.

# Panelists

- ❖ Charles Chambers – U of Houston
- ❖ Mark Gardner – Virginia Tech
  
- ❖ Main Topic: What impact the CI plan has had on strategic planning at the campus level, including providing support for research

# Question #1

- ❖ The CC-NIE/CC\*IIE solicitation inserts some specific requirements for the campus CI Plan. Are they consistent with your plans - helpful in driving your planning? or are they confusing and awful 😊
  - "sustainability of proposed work..."
  - IPv6
  - InCommon Federation

# Other Questions

- ❖ Is this a living document (why or why not)?
- ❖ Was there a campus CI plan pre-existing, or was this created just for your CC-NIE proposal?
- ❖ Do you see value in sharing campus CI plans across the community – is it helpful to have a set of plans available as reference (as some are now thanks to Esnet hosting content)
