Architecture Panel

Javad Boroumand, Cisco Systems
Dave Clark, MIT
Terry Gray, U of Washington
Roch Guerin, U of Pennsylvania

Steve Corbató, Internet2 and U of Utah
(facilitator)

Reconnections Workshop – Chicago – 25
October 2005
1. What is the future of the perimeter?
2. What are likely models for the campus network?
3. What is the best approach to on-and-off enterprise laptop?
4. What role will gigapops play?
5. What are the best ways to accommodate personal lambdas?
6. What will QoS really look like?
7. What would a security architecture look like?
8. What would a management architecture look like?
So what did I miss yesterday?

- Does the current layering structure still make sense?
- Are the motivations for scale -- campus, regional, national – technical, economic, and/or political?
- So do we just need a management architecture?
  - Selective network services
  - Diagnostics
- Who ordered this inverted economics?
  - Disincentives for sharing - personal λ’s
- Is virtualization the path forward?
- How do we break out of the current mold for network architecture?
  - How to support the needs of network research better?
  - Should we dream of GENI?
- Should the architecture facilitate the drive to isolation?
- What can we learn from SMTP?
- What about enterprise architecture and the perimeter?
